

Executive Summary – Coffee Shop Sales Dashboard

Project Overview

This project analyzes the overall performance of a coffee shop using a data-driven dashboard. It combines sales, customer footfall, product categories, and time-based trends to provide actionable business insights and support decision-making.

Business Performance

The coffee shop generated approximately **\$698K in total sales** from **149K customers**. The **average bill per person is \$4.69**, with **1.44 orders per customer**, indicating that most customers purchase a single item with limited add-ons.

Customer Behavior & Peak Hours

Customer activity is highly concentrated in the **morning (7 AM – 10 AM)**, with a peak around **9 AM**. After 10 AM, there is a noticeable decline in orders, highlighting a strong dependence on morning traffic.

Product Category Insights

- **Coffee** is the leading contributor to sales
- Followed by **Tea** and **Bakery items**
- Beverage products dominate overall revenue

This shows that the business is primarily driven by drink-based purchases.

Order Size Analysis

- **Regular (31%) and Large (30%) sizes** dominate orders
- **Small size (9%)** has the lowest share

This suggests an opportunity to promote smaller sizes through pricing or combo offers.

Store Performance

- **Hell's Kitchen** is the top-performing store in both sales and footfall

- **Astoria** performs moderately well
- **Lower Manhattan** shows comparatively lower performance

This indicates a need for improvement strategies at underperforming locations.

Top-Selling Products

- **Barista Espresso** is the highest revenue-generating product
- Followed by **Brewed Chai Tea** and **Hot Chocolate**

Customers show a strong preference for classic and specialty beverages.

Weekly Sales Trends

Sales remain **consistent throughout weekdays**, with slight declines on weekends. This reflects stable demand but also highlights an opportunity to increase weekend engagement.

Key Insights

- Sales are heavily dependent on **morning hours**
 - **Beverages drive the majority of revenue**
 - Opportunity exists to increase **average order value**
 - Certain locations and product segments need improvement
-
